Bilingual (FR/EN) • Enterprise AI & Automation • Canadian Public Sector • SUMMIT • FINS

Professional Summary

Strategic technology leader with 25+ years across IT infrastructure, automation, AI, and agentic systems — the profile of the Enterprise Architect of tomorrow, applied to revenue. My UiPath journey spans the three verticals that define the Canadian territory: two years leading Canadian Public Sector accounts, then the SUMMIT vertical, and for the past 8 months landing and scaling a large Canadian financial services institution — a net-new FINS account with multi-million-dollar ARR — taken from an 8-vendor evaluation to full-platform production with ATO in under a year. Always post-sale by title, I have consistently bridged AE and SE gaps through every org change: running discovery, demos, architecture, and executive alignment when no one else could — including originating a seven-figure iARR agentic expansion for a large provincial energy utility end-to-end. Fluent in English and French, deeply networked across the federal account base, Québec enterprise, and the partner ecosystem (global and specialist automation/SI partners). An Empathic Sherpa who runs as a one-man army: my own solution engineer, architect, and closer in the room.

Where I Win

- **Canada PubSec (2 yrs):** two years leading CS the Canadian federal book (major Canadian federal departments and agencies) and the vertical — TAM/CSM/AE alignment, security clearance context (Protected B), and trusted relationships across accounts and delivery partners. I know everyone.
- **SUMMIT vertical:** carried a 7+ enterprise account book (#summit-all-extended) spanning a large Canadian telecommunications provider, global manufacturers, provincial utilities, forestry & wood products, and water technology — protecting renewals and building expansion (seven-figure iARR utility expansion built solo: 600+ agent CX play, 26+ FTE savings, multi-million-dollar recovery quantified).
- **FINS — large Canadian financial institution (8 mos):** landed and scaled a large Canadian financial services institution to multi-million-dollar ARR in 8 months — full UiPath platform live with ATO in a post-breach security environment; customer projects nine-figure automation value over 3 years; Captiva replacement and 15-use-case pipeline in motion. SOON (one month) RFI will be received to allow a BP takeover.
- **Bridging AE & SE:** through every reorg I filled the AE/SE gap myself — discovery, demos, French-language validation, RFP responses (large telecom rip-and-replace), architecture reviews, and executive sessions — keeping deals moving when coverage disappeared.
- **New logo via partners:** a third of territory growth comes from new logos — my partner-first motion (global and specialist automation/SI partners) turns partner ecosystems into an outbound engine.
- **Retention:** zero-escalation account management (large Canadian financial institution: 13/13 cases resolved, 100% SLA), churn-risk playbooks (Flex→Unified transition standard adopted by GTM), renewal protection across the book.

Professional Experience

UiPath Inc. — Enterprise Automation & AI

Field CTO / Sr. Technical Account Manager, AMER | June 2024 – Present

- SUMMIT vertical account leadership across 7+ enterprises in telecommunications, global manufacturing, provincial utilities, forestry & wood products, and water technology — renewals, Act2/agentic enablement, and expansion strategy; post-sale accountability across a nine-figure AMER portfolio.
- Last 8 months: landed a net-new large Canadian financial services institution — full platform (IDP/IXP/Automation Cloud) to production with ATO through GAIA, CRA, and CVOP governance; driving Captiva modernization and a 15-use-case expansion pipeline.
- Originated a large provincial energy utility agentic/CX expansion (seven-figure iARR) as the sole technical resource: discovery, demos, French-language validation, EA engagement, executive alignment.
- Bridged AE and SE coverage gaps through successive org changes — owning pre-sale motions (RFPs, demos, architecture) from a post-sale seat to keep accounts and deals moving.
- Built data-driven engagement frameworks, adoption playbooks, and the Flex→Unified transition standard adopted as AMER GTM best practice; primary SME for AI, IT governance, SecOps, and infrastructure.
- TAM Council and Technical Enablement / Product Adoption member; designed CSM/TAM engagement model v2.0 and partner-portfolio alignment.

Technical Account Manager II / Senior — Canadian Public Sector | 2022 – May 2024

- Two years leading the Canadian federal public sector book: major Canadian federal departments and agencies — post-sale strategy for a high-seven-figure book across 9+ accounts.
- Spearheaded Canadian Public Sector collaboration and vertical leadership across an eight-figure vertical as interim gap — aligning TAM, CSM, and AE motions across federal accounts and partners.
- Created the EASYLAB enablement baseline and the UiPath skills-badge certification proposal; championed "Automation Suite as a Service" partner offerings.

Technicolor

Infrastructure Architect | 2016 – 2022

- Designed hybrid and cloud-native platforms (OpenStack, Azure VDI, HCI); architected secure content environments and VOD-scale media platforms.
- Delivered work-from-home VDI for 2,200+ corporate staff and 5,000+ VFX artists; automated DR pipelines and air-gapped networks; governance and CI/CD with GitHub and Terraform.

Senior System Engineer IV | 2007 – 2016

- Citrix XenApp at scale (225+ apps), AWS/Azure migrations, MPA-aligned security architecture, Platform9 transitions, data-center consolidation, custom ServiceNow modules.

NOVASYS Corp. — System Administrator | 2006 – 2007

IBM Canada (global pharmaceutical account) — Level 2 & 3 Supervisor | 2002 – 2006

Education & Certifications

- D.E.P. — IT Infrastructure Support & Administration (1998–2002)
- Continuous professional development (1998–present): UiPath platform, OpenStack Bootcamp, AWS, Azure, Splunk, PowerShell, VMware vSphere, Citrix XenDesktop, CompTIA A+.

Technical & Platform Depth

UiPath: Automation Cloud, Orchestrator, Studio/Autopilot, IDP/DU, IXP, Agentic & Maestro, Insights, Test Suite, Process Mining, AI Units & consumption models. Infrastructure: Azure, AWS, OpenStack, VMware, Citrix/VDI, Nutanix/HCI, Terraform, Packer, GitHub Actions, Splunk/ITSI, ServiceNow, CI/CD & IaC, SecOps, MPA content security.

Mindset

The Empathic Sherpa — guiding customers and colleagues through complex landscapes with empathy, precision, and impact • Theory of Constraints practitioner • "Mr. Fix It" problem solver • C-level communication • Ownership mentality • Bridge-builder across Sales, SE, Product, and Partners • High-energy, bilingual, hit-the-ground-running.
